Panel Orientation

Akri Polymers can be used around the home in many applications, sometimes in a vertical orientation such as in showers or feature walls.

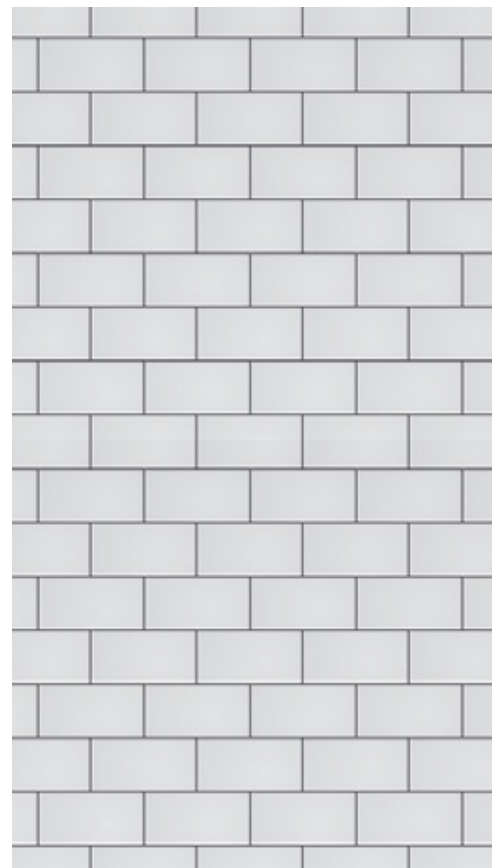

Our Select range can be reorientated to accommodate this and to provide a design across one or more vertical panels.

To order a Select Polymer Panel, make a note on your order clearly stating you require the design in a vertical orientation. If you require the design to be continuous across more than one sheet clearly note this at the same time.

Please note that only a section of the Select design is able to be provided when ordering in a vertical orientation. Our designer will choose the best section based on your order requirements. See example images shown.

Horizontal

Vertical

Akril Select

For the current Akril Select order form, please contact us at mto@nover.com.au or contact your local branch.

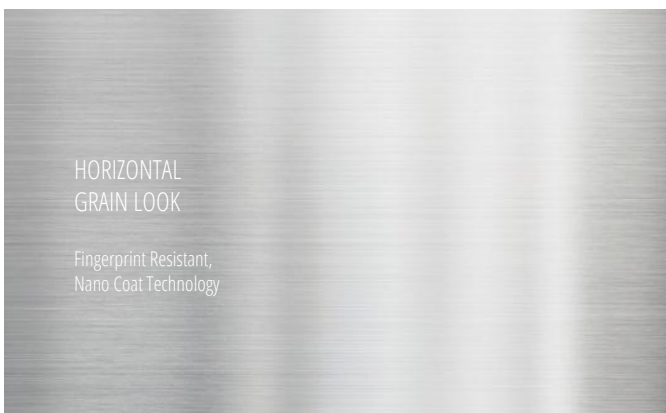

Akril offer a range of stainless steel filler panels to give you even more options in your kitchen.

Easy DIY installation directly over an Akril Polymer gives you the flexibility to use behind a gas cooktop and protect against radiant heat.

With 4 sizes available in horizontal grain and 2 in vertical, Akril stainless steel filler panels are sure to match your kitchen.

Nano Coat technology gives all horizontal grain stainless steel filler panels fingerprint resistance, a feature that removes one of the most common issues with stainless steel in the home.

Note: Akril Stainless Steel Filler panels are a non-stock item. Please allow 10-15 working days.

Subway Tile

Laundry Splashbacks

Akril is a highly engineered polymer, enhanced with colour, that offers a new source of design inspiration.

This durable panel was originally developed as a cost effective alternative to painted glass but its qualities of versatility, flexibility and workability allow it to stand alone in a range of domestic, commercial and display situations.

Having half the weight and being more cost effective than painted glass is a great start-but Akril has so much more going for it.

It's ready availability and ease of installation reduces lead times and delays. It has higher heat distortion than conventional polymers (up to 80° Celsius) which means it has more applications. What's more, scratches can be polished out.

In so many ways, 'brilliant' is the only word that can sum up Akril's great qualities so completely. From the lustre of its surface to the depth of its colour.

Brilliant! From its versatility and durability, to its extraordinary practicality on site.

Ballina

Ease of Installation

With no special tools required, Akril is easily installed by any tradesperson.

Simply cut to size and adhere Akril with a clear neutral cure silicone.

Durable, versatile, flexible and workable are the qualities that make Akril's engineered polymer stand alone in a variety of domestic and commercial applications. Brilliant!
