Reflectance Value

Light Reflectance Value (LRV) indicates the amount of visible and usable light reflected from a surface when exposed to a light source.

The table below presents the average LRV for a selection of Colourpyne colours.

With woodgrain finishes, LRV can vary noticeably depending on the specific area measured, due to variations in tone and pattern.

As a result, their LRV are averaged and may not reflect a consistent measurement - unlike solid colours, which tend to deliver uniform reflectance results.
